Job Application for Project Engineer - Automation

Dear Manager / Human Resources,

I'm excited to apply for the position of **Project Engineer - Automation**. I am a graduate student pursuing Master of Science in Electrical Engineering with more than 8 years of experience as Instrumentation and Control Engineer in all the stages of Engineering Design. I have extensive experience in creating engineering solution for process control systems. This has further motivated me to expand my knowledge in automation for power systems. In addition to this, I have academic knowledge to model power systems and microgrid using Matlab and AMPL. My recent internship experience involves application support for an IoT (Internet of Things) based next generation of SCADA for internal customers. I have keen interest in power system automation and protection where I can apply my past automation experience and academic knowledge to create next generation of power systems.

Sincerely,

Chetan Kansagara
